The VELO\textsuperscript{3D} Sapphire is the next generation in metal laser powder bed fusion. While conventional systems often require supports for any surface below 45 degrees, Sapphire uniquely enables designs with overhangs down to zero degrees.

Sapphire is designed from the ground up with production in mind. Offering the same SupportFree capability and quality control in two different build volumes, Sapphire supports a comprehensive list of applications.

Production-Level Additive Manufacturing

**Enabling SupportFree\textsuperscript{TM} Geometries**
- Low angles down to zero degrees (vs 45 degrees with conventional AM) enables impossible geometries and significantly less post processing
- Large inner diameters up to 100 mm (vs 10 mm with conventional AM) enables manifolds, volutes and crossovers
- High aspect ratios up to 3000:1 (vs 8:1 with conventional AM) enables high performance heat exchangers and assemblies

**Made for Production**
- Our cylindrical 315 mm diameter build chamber is now available in 400 mm and 1000 mm configurations
- Both feature dual kW lasers for faster printing and our proprietary non-contact recoater to reduce the risk of part collisions
- In-situ metrology sensors enable visibility into the quality of every layer of the build
- Calibration requires no external instrumentation enabling runtime and one-click optics calibration
SupportFree Metal 3D Printing

VELO® separates itself from existing powder bed fusion solutions with its unique ability to print low angles and overhangs down to zero degrees, as well as large diameters and inner tubes up to 100 mm without the need for supports.

This not only reduces the need for post-processing, but it overcomes the “45 degree rule” for conventional AM which recommends supports for any any surface less than 45 degrees. VELO® frees designers to build the impossible – unlocking a wealth of designs that can now be produced with additive technology.
